International Conference on

Mainstream Block Chain Implementation (ICOMBI) 2020

ABOUT IEEF:

The International Enterprise Engineering Foundation (IEEF) is a professional body established for rendering services to the industry and society. The foundation is embedded with experts from a variety of sectors. Having served the academia and the industry under a variety of circumstances and situations, they bring in their rich experience to benefit industry at large. The board of trustees at IEEF is committed to encouraging stakeholders from contemporary topics and strategies.

ABOUT THE CONFERENCE

Blockchain technology is being hailed as one of the most revolutionary and disruptive technological advances of today. It has changed our perception of what constitutes data, its storage and transfer of value. However, what makes the blockchain truly revolutionary is its potential in applications across different horizons. Today, there are hundreds of start-ups that are using blockchain technology to disrupt an array of industries such as trade, finance, health care, cloud storage, and cybersecurity, among many more. Despite a large number of industrial sectors that blockchain technology is impacting, there are also concerns regarding the technology that are still preventing its widespread adoption.

This conference, organized by the Global Engineers Forum (GEF) will aim to deliberate on the various challenges, features, issues, and future of the concept. The event will bring together academicians, industry representatives, policy-makers, and researchers, who will debate on the topic. It is envisaged that the key outcomes of the event will be submitted to the Government of Karnataka (GoK).

"Challenges and Issues for Effective Governance"
